

JOIN PROJECT SOAR FOR A WEBINAR

Strengthening Research Utilization in HIV Implementation Science

29 June 2016, 10:00–11:15 a.m. (EDT)

Supporting stakeholders to use research findings when crafting policies and programs is a critical part of the research process. However, researchers are often in need of strategies for how best to engage stakeholders and facilitate the uptake of results.

In this webinar, Project SOAR researchers and experts will draw on experiences from a variety of countries and contexts in sharing effective strategies for communicating research findings to stakeholders and supporting them to use the findings for decision-making.

Research utilization is a major component of Project SOAR—a USAID-supported, global implementation science initiative focused on generating evidence to improve HIV prevention, care, and treatment programs and policies. The Population Council leads Project SOAR in collaboration with Avenir Health, Elizabeth Glaser Pediatric AIDS Foundation, Johns Hopkins University, Palladium, and the University of North Carolina.

Featured Panelists:

Tara Nutley, Senior Technical Advisor for Project SOAR and MEASURE Evaluation, Palladium

Stefan Baral, Associate Professor in the Department of Epidemiology and Director of the Key Populations Program, Johns Hopkins Bloomberg School of Public Health

Verne Kemerer, Research Utilization Advisor for Project SOAR and MEASURE Evaluation-Strategic Information for South Africa, Palladium

Moderator:

Sam Kalibala, Senior Associate and Director of HIVCore, Population Council

Project SOAR (Cooperative Agreement AID-OAA-14-00060) is made possible by the generous support of the American people through the President's Emergency Plan for AIDS Relief (PEPFAR) and United States Agency for International Development (USAID). The contents of this presentation are the sole responsibility of Project SOAR and Population Council and do not necessarily reflect the views of USAID or the United States Government.

Through operations research, Project SOAR will determine how best to address challenges and gaps that remain in the delivery of HIV and AIDS care and support, treatment, and prevention services. Project SOAR will produce a large, multifaceted body of high-quality evidence to guide the planning and implementation of HIV and AIDS programs and policies.
